KIAN HOE PLANTATIONS BERHAD ISCC PLUS SUSTAINABILITY DECLARATION

Supplier Name:

KIAN HOE PLANTATIONS BERHAD (CORONATION PALM OIL MILL)

Supplier Address:

Batu 3, Jalan Batu Pahat, 86000 Kluang, Johor, Malaysia

Certificate Number:

ISCC-PLUS-Cert-DE105-90342502

Delivered **1,482** **MMBtu** of **Bio-Circular Biomethane**

with a GHG emissions of **5.40** g CO₂-eq/MJ to

Recipient Name:

GAS MALAYSIA GREEN VENTURES SDN BHD

Recipient Address:

No. 5, Jalan Serendah 26/17, Seksyen 26, 40732, Shah Alam, Selangor, Malaysia

For the Dispatch Period

from **01/01/2026** to **31/01/2026**

Additional Information

Raw Material Category: Bio-Circular
Type of Product: Biomethane
Type of Raw Material¹: Palm Oil Mill Effluent (POME)

Contract Number:

Address of Dispatch/Shipping Point of the Sustainable Material:

Address of Receipt/Receiving Point of the Sustainable Material:

ISCC PLUS (205-01) GHG-Emissions Requirements:

Total GHG Emission Value²: **5.40** gCO₂-eq/MJ

$$\begin{array}{ccccccccccccc}

Transportation Distance: km km km

Product Specification (If applicable):

Type of Recycling Operations (Circular/Bio-Circular):

Waste Status (Circular/Bio-Circular):

Chain of Custody Option:

Mass Balance Option³:

Multi-Site Credit Transfer:

ISCC Compliant

The raw material (circular/bio-circular) meets the definition of waste or residues, i.e., was not intentionally produced and modified, or contaminated, or discarded, to meet the definition of waste or residues (applicable to waste and residues and products produced from those).

*Explanations

1) Raw material relates to the initial material at the beginning of the supply chain. Example:

- Circular (including technical-circular): mixed plastic waste;
- Bio-Circular: UCO;
- Bio: Corn;
- Renewable-Energy-Derived: Electricity;

for further explanation, please see "List of material eligible for ISCC PLUS Certification"

2) Total GHG emissions from supply and use of the product

Indication of separate GHG emission values is optional

E_{ec} GHG emissions from the extraction or cultivation of raw materials

E_l Annualized (over 20 years) GHG emissions from carbon stock exchange due to land use change

E_p GHG emissions from processing

E_{td} GHG emissions from transport and distribution

E_u GHG emissions from the product in use

E_{sca} GHG emissions savings from soil carbon accumulation via improved agricultural management

E_{ccs} GHG emissions savings from carbon capture and geological storage

E_{ccr} GHG emissions savings from carbon capture and replacement

ISCC PLUS Add-On (205-01) GHG Emission Requirements implies that every element of the supply chain must provide:

- GHG emissions
- Mode of transportation (not applicable if default value for transport is being used)
- Transporting distance from supplier to company in kilometers (not applicable if default value is being used)

3) Please find detailed information on the mass balance option in the ISCC PLUS system document in the chapter "Mass balancing approach under ISCC PLUS"
