0.00

mt

0.00

mt

Total quantity of **certified** material:

0.00 mt

Total quantity of delivery (optional):

0.00 mt

(mandatory for EN 15343 add-on)

Percentage of certified material:

NA %

(of the total quantity of delivery)
(mandatory for EN 15343 add-on)

* Please note that decimals must be indicated with a period rather than a comma.

Type of recycling operation (circular / bio-circular):	☐ Chemical	☐ Mechanical	☐ Other recycling activities	☐ N/A
Specifications of recycling activity:				
Waste status (circular/bio-circular):	☐ Post-consumer	☐ Pre-consumer	☐ Mixed / Unspecified	
Type of raw material (optional):	<Please select>			
Raw material specification: (if applicable)				
Country of origin of the raw material (optional):				
Additional information:				

2. Chain of Custody

Chain of custody method	<Please select>
Calculation Method (for Mass Balance only)	<Please select>
Mass Balance Option ² (for Credit method only)	<Please select>

Reflection of input characteristics ^{3,4,5}

☐	Compensation of input characteristics has been applied upstream for received certified input material(s)
☐	Compensation of input characteristics applied by the issuer of this SD **

** Mandatory to fill out Extent of input compensation

Extent of input compensation at issuer of the SD

Percentage of certified material including compensation of input characteristics	0.00 %
Percentage of certified material with complete reflection of input characteristics	0.00 %
Compensated share at process of issuer of this SD	0.00 %

Multi-site credit transfer:	☐ Issuer of SD	☐ Applied Upstream
-----------------------------	---------------------------------------	---

3. Sustainability Criteria

☐	ISCC compliant
☐	The raw material complies with the sustainability criteria according to the ISCC 'Sustainability Requirements' as laid down in System Documents ISCC EU 202-01/-02 for agricultural biomass or ISCC EU 202-03/-04 for forest biomass.
☐	The raw material (circular/bio-circular) meets the definition of waste or residues, i.e. was not intentionally produced and modified, or contaminated, or discarded, to meet the definition of waste or residues (applicable to waste and residues and products produced from those).

Please note that decimals must be indicated with a period rather than a comma.

-
- ☐ Should any add-ons be applied to the material delivered with this SD, it is ensured that the Annex is completed accurately and includes all the relevant details about the add-on.
-
- ☐ The product has been analysed via ¹⁴C Isotope Measurement and biogenic content has been proved based on this measurement. The data on the actual percentage of the Biogenic Carbon content is included in the Annex in the Product information field and (a copy of) the report is provided alongside the SD.
-
- ☐ For the outgoing material with this SD, if the Hetero Atoms (Nitrogen and Oxygen) are considered, then it must be ensured that they are included as part of the certified share according to ISCC PLUS requirements. If the hetero atoms are no longer present in the certified output material (molecule), the certified share needs to be reduced by the respective mass of the hetero atoms from the ISCC compliant input material.
-

Not valid without Certificate Number of ISCC certificate above.

Explanation

- 1) Raw material category relates to the initial feedstock at the beginning of the supply chain (e.g. circular (including technical-circular): mixed plastic waste; bio-circular: UCO; bio: corn; renewable-energy-derived: electricity; for further explanation, please see "List of material eligible for ISCC PLUS certification").
- 2) Please find detailed information on the mass balance option in the ISCC PLUS system document in the chapter "Mass balancing approach under ISCC PLUS".
- 3) According to the limitations for mass balancing under ISCC PLUS. Please refer to the System Document *ISCC PLUS 203 - Traceability & Chain of Custody* and the Guidance document ISCC PLUS Mass Balance for further information.
- 4) Refers to "Similar-in-nature" according to ISO/DIS 22095-2:2026. Guidance and clarifications on similar-in-nature are further provided in the ISCC PLUS SD and MB Guidance documents.
- 5) Compensation of input characteristics is only possible to apply and to select/check/tick the box in this template only under two Mass Balance options, namely "Attribution determined by mass" and "Attribution determined by energy" and under Processing Unit scope.

Note: For SAI, the Sustainability requirements of ISCC EU and ISCC PLUS have been determined as "SAI FSA 3.0 Gold Level Equivalence". Please check ISCC's website on System Updates for more information on SAI Platform.

Annex for Sustainability Declaration according to ISCC PLUS v4.0

Unique number of Sustainability Declaration^{1,2}:

Date of issuance: (DD.MM.YYYY)

1. Product Information

Please fill the product related information. E.g., product name, individual weight of the product, composition, information related to attribution based on certified inputs (reflection of input characteristics). If the GHG Add-on is applied the Sn Factor for Biogas or Biomethane shall be indicated here. The biogenic carbon content of the Product batch conducted via 14C analysis should be mentioned here if applied

2. Voluntary add-ons (In case there is any add-on applied, this field must be filled in)

☐ ISCC PLUS (205-01) GHG-Emissions³

☐ Total Default value according to RED III applied

Disaggregated Default value according to RED III applied: ☐ e_{ec} ☐ e_p ☐ e_{td}

Total GHG emission value: kg CO₂-eq/dry-ton

$$\begin{matrix} e_{ec} & e_i & e_p & e_{td} & e_u & e_{sca} & e_{ccs} & e_{ccr} & E \\ \hline \end{matrix}$$

$$\text{[]} + \text{[]} + \text{[]} + \text{[]} + \text{[]} - \text{[]} - \text{[]} - \text{[]} = \text{[0.00]}$$

$e_{td,feed}$ $e_{td,prod}$ Transportation Distance: Ship km Train km Road km

☐ Cradle-to-Gate

☐ Cradle-to-Grave

Allocated heat: gCO₂eq/MJ heat

Allocated Electricity: gCO₂eq/MJ Electricity

Calculation of GHG-Emissions for RFNBOs and RCFs

$$\begin{matrix} e_i & e_p & e_{td} & e_u & e_{ccs} & E \\ \hline \end{matrix}$$

$$\text{[]} + \text{[]} + \text{[]} + \text{[]} - \text{[]} = \text{[0.00]} \text{ gCO}_2\text{eq/MJ}$$

$$e_i = e_{i \text{ elastic}} + e_{i \text{ rigid}} + e_{\text{ex-use}}$$

$$\text{[]} = \text{[]} + \text{[]} + \text{[]}$$

Allocated heat: gCO₂eq/MJ heat

Allocated Electricity: gCO₂eq/MJ Electricity

☐ ISCC PLUS (001) EN 15343⁴

☐ ISCC PLUS (202-10) Regenerative Agriculture - Extended

3. Information for Deliveries of Biofuels to Japan

For deliveries of corn or corn based ethanol from the U.S.:

☐ Use of Japanese Default Values for U.S. ethanol (corn)

☐ Emissions from Land Use Change are zero ($e_l = 0$)

For deliveries of sugar cane or sugar cane based ethanol from Brazil:

☐ Use of Japanese Default Values for Brazilian ethanol (sugar cane)

☐ Emissions from Land Use Change are zero ($e_l = 0$)

Not valid without Certificate Number of ISCC certificate above.

Explanation

- 1) The Unique number of the Sustainability Declarations must be reflected in the Annex.
- 2) The Annex is only applicable for the suppliers that want to provide additional information related to their products or information on add-ons applied under ISCC PLUS.

3) Total GHG emissions from supply chain and use of the product

Indication of separate GHG emission values is optional

- e_{ec} GHG emissions from the extraction or cultivation of raw materials
- + e_l Annualized (over 20 years) GHG emissions from carbon stock change due to land use change
- + e_p GHG emissions from processing
- + e_{td} GHG emissions from transport and distribution
- + e_u GHG emissions from the product in use
- e_{sca} GHG emissions savings from soil carbon accumulation via improved agricultural management
- e_{ccs} GHG emissions savings from carbon capture and geological storage
- e_{ccr} GHG emissions savings from carbon capture and replacement
- e_i GHG emissions savings from supply of inputs

ISCC PLUS Add-On (205) GHG Emission Requirements implies that every element of the supply chain must provide:

- GHG emissions savings from supply of inputs
- Mode of transportation (not applicable if default value for transport is being used)
- Transporting distance from supplier to company in kilometers (not applicable if default value is being used)

4) The ISCC PLUS add-on EN 15343 aligns with the recycling requirements of the EN 15343 standard. Its suitability for accreditation and equivalence is currently under review by the German Accreditation Body (DAkkS). This add-on is currently not applicable where accreditation is legally required.
